

Plugin and extend.

Spotlight on:

Standalone Scoop Plugins & Extensions

With standalone plugins and extensions from Scoop Publishware, you make sure your workflow is smart, fast and easy.

And you will still be working with your favorite tools.

Autorepro example:

Here are some steps from the workflow in *Scoop Autorepro*, our add-on program for Adobe InDe-

Enhance
your
system

sign and QuarkXPress:

ALL IMAGES on a page are displayed in a palette in InDesign or QuarkXPress. The red bulb indicates that the image has not been sent through ColorFactory.

1. IF YOU CLICK on an image on the page, the image name in the palette will be selected.

2. FOR EACH IMAGE you can select what channel in ColorFactory to send the image through.

3. IF YOU CLICK on the "All" button, all images on the page (visible in the palette) will be sent to be processed by ColorFactory. If you click on the "Selected" button

only the selected images in the palette will be sent for processing by ColorFactory.

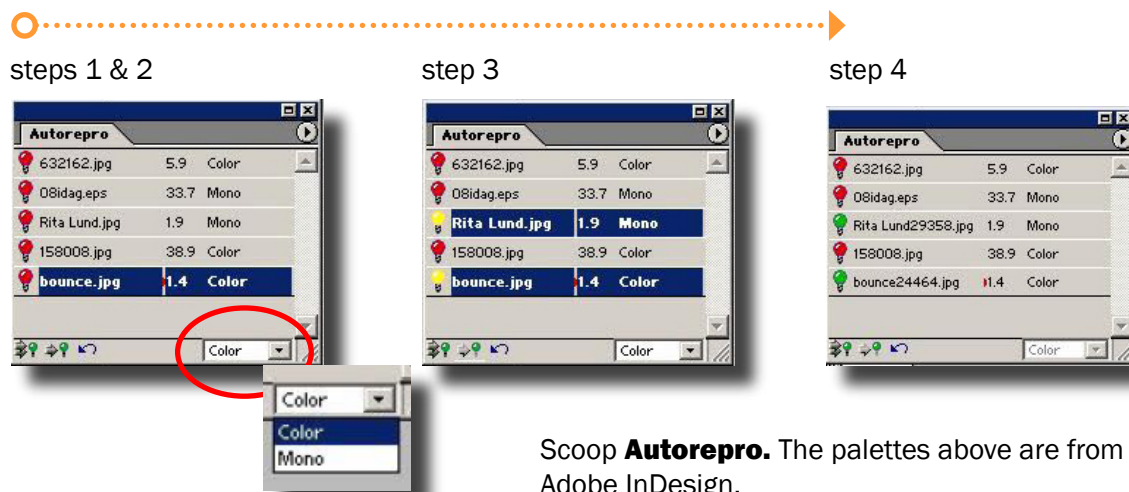

When an image has been sent for processing by ColorFactory the bulb will turn yellow. You can continue working on the page.

4. WHEN COLORFACTORY is finished, the processed image will be automatically updated on the page. The bulb will then turn green to indicate this.

The image is now colour separated, sharpened and cropped as defined in ColorFactory.

IF YOU WANT to revert to the original image you can do so by clicking on the "Undo" button. The bulb will then be half green, half yellow.

Standalone Scoop Plugins & Extensions in brief

■ Scoop Jumps

Plugin and extension for Adobe InDesign and QuarkXPress (limited functionality in QuarkXPress, ask your reseller).

- ✓ Scoop Jumps links all “Continued”-stories together, between different pages in your paper or magazine, with free text flow between the sections.
- ✓ Automatically tracks changes from all pages and alerts if any part of the article changes.
- ✓ Automatically creates text for page references.
- ✓ Manages and saves the complete article for use with Scoop eLibrary and Scoop ePaper.

■ Scoop Dragon

Plugin for Adobe InDesign, integrated to FotoWare products.

- ✓ Contains full Scoop Autorepro functions (*see other page*)
- ✓ Integrations with FotoWare ColorFactory and FotoStation.
- ✓ Easy drag-and-drop of pictures on to the page.
- ✓ Pictures will follow cropping instructions, captions contents and more, from FotoStation on to the InDesign page.

■ Scoop Autorepro

Work with your picture layout direct on the page and let Scoop Autorepro manage the details. *See other page.*
